

sensNORM Certified – Quality Seal for Verified Performance Data in Presence and Motion Detectors

The “sensNORM Certified” quality seal represents objectively verified detection ranges and sensitivity in presence and motion detectors. It is not a product safety certification, but a cross-manufacturer standardized testing procedure for reliable and comparable performance data.

What is sensNORM?

sensNORM is an industry standard for the transparent testing and documentation of sensor performance. Detection ranges are measured in the laboratory under standardized conditions, triple-tested, and validated under real-life conditions.

What does the logo on the packaging stand for?

The logo indicates: The sensor of this product has been tested in an independent sensNORM laboratory using standardized methods. It confirms realistic performance specifications for tangential and radial detection ranges.

Quality seal for verified performance data.

Your sales advantage:

- Stronger differentiation in the market
- Trust through verifiable quality
- Planning and application reliability for professionals
- A persuasive sales argument in wholesale and retail
